Deposit Growth by Departamento Against the National Series

Red: departamento. Grey: 23−bank national total, same line in every panel

Source: SBS Boletin cuadro B−2358 (deposits by office and bank), branch panel Jan−2011 − Jun−2026. 23 private banks; Banco de la Nacion, cajas municipales and cajas rurales are not in this table. Twelve−month log growth of total deposits in each departamento (red), against the same for the 23−bank national total (grey), repeated in every panel. Panels are ordered by deposit size, Lima first; note the free vertical scale on each. The national line is the dominant feature of almost every panel −− the 2020−21 COVID surge and the 2022−23 contraction appear everywhere at once. Departamento−specific departures are largest in the smallest regions and are short−lived. Deposits are booked where the account sits, so corporate balances held at Lima head offices are attributed to Lima, not to the region of activity.
