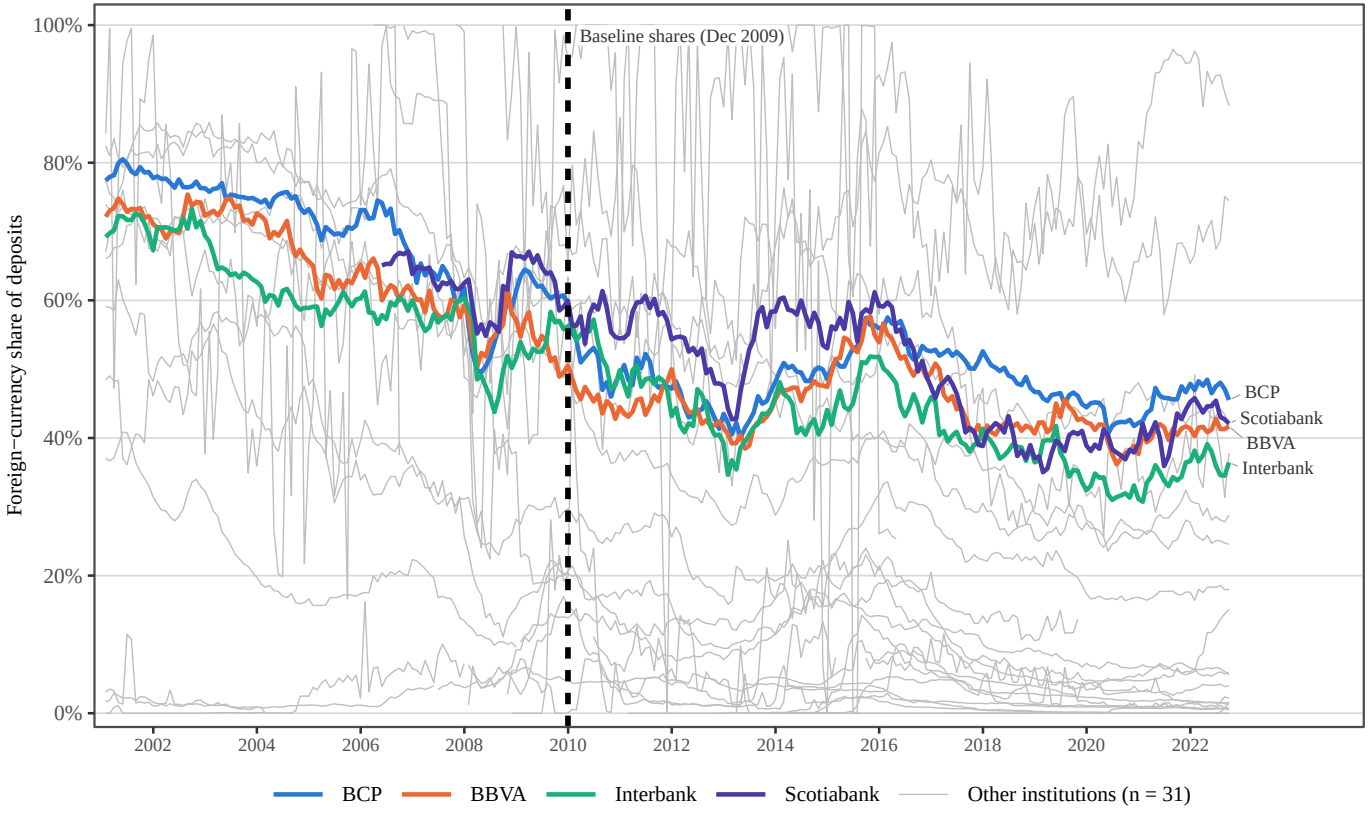
## Foreign−currency share of deposits by institution

Monthly, Jan 2001 to Sep 2022. 35 of 57 institutions shown (positive deposits in at least 60 months); big four highlighted



Source: SBS Series Estadisticas (Banca Multiple and Empresas Financieras). Share = ME deposits / (MN + ME deposits), both in thousands of soles. ME deposits are valued in soles at the month−end exchange rate, so a sol depreciation raises the ME share mechanically. A month without positive deposits is left blank. Institutions with positive deposits in fewer than 60 months (edpymes, which take no deposits, and short−lived entrants and exits) are omitted. The dashed line marks the baseline date of the shares used in the bank shocks.
